

SIA2 SYSTEM INTEGRATION & ARCHITECTURE INDIVIDUAL ACTIVITY #1

Login Module Guidelines

Purpose

The Login Module provides a secure way for users to access the system by verifying their identity through authorized credentials. It ensures that only registered users can access protected features and data.

Login Module Guidelines

1. User Access

- Only registered and authorized users are allowed to log in.
- Each user must have a unique username or email address.
- Users are responsible for keeping their login credentials confidential.
- Sharing login credentials with others is prohibited.

2. Login Requirements

To access the system, users must provide:

- **Username or Email Address**
- **Password**

Optional:

- Remember Me (if available)
- Multi-Factor Authentication (MFA) code (if enabled)

3. Login Procedure

1. Open the system login page.
2. Enter your registered username or email.
3. Enter your password.
4. Click the **Login** button.
5. If credentials are correct, the system grants access to the dashboard.
6. If credentials are incorrect, an error message will be displayed.

4. Password Guidelines

Passwords should:

- Be at least 8 characters long.
- Include uppercase and lowercase letters.
- Include at least one number.
- Include at least one special character.
- Not contain easily guessed information (e.g., names or birthdays).
- Be changed periodically according to organizational policy.

Example:

- ✓ Strong Password: Hrm@2026!
- ✗ Weak Password: password123

5. Failed Login Attempts

- Users are allowed a limited number of unsuccessful login attempts (e.g., five).
- After exceeding the limit, the account may be temporarily locked.
- Locked accounts require either:
 - Waiting for the lockout period to expire, or
 - Contacting the system administrator for assistance.

6. Forgot Password

If a user forgets their password:

1. Click **Forgot Password**.
2. Enter the registered email address.
3. Verify identity through the provided verification method.
4. Create a new password.
5. Log in using the new password.

7. Session Management

- Users should log out after completing their work.
- The system should automatically log out inactive users after a specified period (e.g., 15–30 minutes).
- Users should avoid leaving active sessions unattended.

8. Error Messages

The system should display clear, user-friendly messages, such as:

- "Invalid username or password."

COLLEGE OF COMPUTER STUDIES

- "Your account has been locked due to multiple failed login attempts."
- "Please enter both username and password."
- "Session expired. Please log in again."

Avoid revealing whether the username or password was incorrect.

9. Software and Technologies

You may use any software and technologies available such as:

Visual Studio Code	Source code editor used for writing and managing application code.
XAMPP	Local development environment that includes Apache, PHP, and MySQL for testing web applications.
PHP	Server-side programming language used to process login requests and authenticate users.
MySQL	Database management system used to store user accounts, hashed passwords, and roles.
HTML5	Creates the structure of the login page.
CSS3	Styles the login interface to improve appearance and usability.
JavaScript	Provides client-side validation and interactive features.
Bootstrap	CSS framework used to create responsive and mobile-friendly login forms.
phpMyAdmin	Web-based tool for creating and managing the MySQL database and user tables.
Git	Version control system for tracking changes and collaborating on development.
Google Chrome / Mozilla Firefox	Web browsers used for testing and debugging the login module.
